

PHISHING EMAIL DETECTION & AWARENESS REPORT

Submitted By:

K.V.J.S. Varalakshmi

Internship:

Future Interns – Cyber Security Internship

Task:

Task 2 – Phishing Email Detection & Awareness System

Tools Used:

Microsoft Word, Google Search, Web Browser

Date:

19 July 2026

OBJECTIVE AND INTRODUCTION

1. Objective:

The objective of this project is to identify phishing emails by analyzing suspicious email characteristics such as fake sender addresses, malicious links, urgent messages, and spoofed domains. This report also aims to create awareness about phishing attacks and provide simple safety guidelines to help users recognize and avoid phishing emails.

2. Introduction:

Phishing is a cyber attack in which attackers send fake emails pretending to be trusted organizations such as banks, online shopping websites, or social media platforms. The main goal is to steal sensitive information like usernames, passwords, bank details, or personal data. Learning how to identify phishing emails helps users stay safe from online fraud and cyber threats.

Phishing Email Analysis

Example 1

Subject: Your Bank Account Has Been Locked

Sender: support@secure-bank123.com

Message:

Dear Customer,

Your bank account has been locked due to suspicious activity. Click the link below within 24 hours to verify your account.

<http://secure-bank123-login.com>

Classification: Phishing

Reason:

- Fake sender email address.
- Suspicious website link.
- Creates urgency to make the user act quickly.
- Asks the user to verify account information.

Example 2

Subject: Welcome to Microsoft

Sender: account@microsoft.com

Message:

Welcome to Microsoft. Your account has been successfully created. No further action is required.

Classification: Safe

Reason:

- Uses an official sender address.
- No suspicious links.
- Does not ask for passwords or personal information.
- The message is informational.

PREVENTION GUIDELINES AND CONCLUSION

PREVENTION GUIDELINES:

- Never click suspicious links in emails.
- Verify the sender's email address before responding.
- Use strong and unique passwords.
- Enable Two-Factor Authentication (2FA).
- Keep your browser and antivirus updated.
- Never share passwords or OTPs through email.
- Report phishing emails to your organization.
- Delete suspicious emails immediately.

CONCLUSION:

This project helped identify phishing emails by analyzing suspicious characteristics such as fake sender addresses, malicious links, and urgent messages. It also explained how users can recognize phishing attempts and follow safe practices to protect their personal information.
